The No Leak Skylight™

Save Big by Replacing Your Skylight During Reroofing

Don't wait until your skylight starts causing problems to replace it! If you're planning to reroof, you'll save time and money in the long run if you replace your skylights at the same time. Plus, when you replace your skylight during reroofing, you'll receive a full skylight warranty that complements the warranty of your new roof.

The No Leak Skylight™

How Venting Skylights Create the Best Homes

Did you know that we spend an average of 90% of our time indoors? Since so much of our time is spent inside, optimal access to fresh air is key for healthy living. VELUX venting skylights, known as our “Fresh Air” Skylights, are a unique, stylish way to incorporate more fresh air into your home.

4 Fresh Air Benefits of Venting Skylights

1. Better Ventilation

Venting skylights let in fresh air and contribute to your home’s ventilation. Open skylights provide a cross breeze, freshening up stuffy rooms and cooling down your living space.

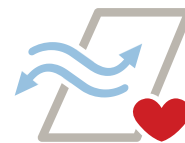

2. Energy Savings

Sunlight can heat up a space while cross ventilation cools it down. Both these natural skylight benefits help cut down on overall energy costs.

3. Healthier Living

Regular exposure to fresh air helps improve digestion, blood pressure, and heart rate. Fresh air also strengthens the immune system and helps cleanse the lungs by releasing airborne toxins.

4. The Chimney Effect

Opening skylights and vertical windows at the same time creates an air flow phenomenon known as the Chimney Effect. As hot air flows out of the skylights, cool air flows in, helping clear out airborne toxins to refresh your entire home.
